Engineering Intern

About Iksha Labs

At Iksha Labs, we are revolutionising the way businesses operate through cutting-edge technological solutions. Our focus is on developing intelligent agents and agentic workflows that automate processes and eliminate the need for human effort wherever possible. By leveraging advanced AI and machine learning, we create systems that enhance productivity and drive efficiency.

Our expertise extends to the healthcare and medical technology sectors, where we develop innovative solutions that improve patient outcomes and streamline medical operations. From medical devices to healthcare platforms, our work is at the intersection of technology and medicine, pushing the boundaries of what's possible.

Iksha Labs is dedicated to continuous learning and growth, ensuring our team members are always at the forefront of the tech landscape. We believe in the power of innovation and collaboration, providing an environment where visionary ideas can thrive and become reality.

Join us to be part of a passionate team that is making a real impact. Together, we can create transformative technology that address

Iksha Labs Pvt. Ltd.

Job Description

What You'll Work On:

- Real-world in-house projects powering AI Agents to automate workflows
- Full-stack development with tech stack including but not limited to **Ruby on Rails, NodeJs, ReactJs, Flutter** etc
- Designing APIs, building scalable UIs, and integrating with databases like **PostgreSQL**
- Debugging, testing, and pushing features live in agile sprints
- Exposure to production-grade architecture, CI/CD workflows, and performance optimization

You Should Know (or be hungry to learn):

- Strong fundamentals in **JavaScript/TypeScript, HTML/CSS**, and one backend language (preferably Ruby, Python, or Node.js)
- Familiarity with **React.js, Rails**, or any MVC framework
- Understanding of **REST APIs**, Git, and working in version-controlled environments
- Interest in AI, ML, or automation is a bonus

We're Looking For:

- Problem solvers who think critically and love debugging
- Self-starters who can take ownership and move fast
- Team players who believe feedback is a superpower
